DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation

Application/Control Number: 10/526,104

Art Unit: 3744

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cole et al (6,016,665) in view of Katsuki et al (5,735,135).

Cole et al discloses applicants' basic inventive concept, a natural gas liquefier with a precooler 32 and a second cooling system 33 with a heavies separator 36 between the precooler and the second cooling system, substantially as claimed with the exception of using a "piping complex". Katsuki et al shows connector 37 containing piping and connections to cooling system components to allow easier connection to be old in the cooling art. It would have been obvious to one of ordinary skill in the art at the time of applicants' invention from the teaching of Katsuki et al to modify the liquefaction system of Cole et al by using a piping complex to make the device easier to connect and transport. In regard to the components being on one side of the piping complex, it is noted that the first and second cooling systems of Cole et al are on one side of the system. Nevertheless, it is considered obvious to on ordinary practitioner in the art to place the components which will be connected together as close as possible to reduce the piping required in the system and to place them on one side to make the components easier to assemble and maintain.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roberts et al (6,119,479) in view of Katsuki et al (5,735,135).

Art Unit: 3744

Roberts et al discloses applicants' basic inventive concept, a natural gas liquefier with a precooler 104 and a second cooling system 122 with a heavies separator 106 between the precooler and the second cooling system, substantially as claimed with the exception of using a "piping complex". Katsuki et al shows connector 37 containing piping and connections to cooling system components to allow easier connection to be old in the cooling art. It would have been obvious to one of ordinary skill in the art at the time of applicants' invention from the teaching of Katsuki et al to modify the liquefaction system of Roberts et al et al by using a piping complex to make the device easier to connect and transport. In regard to the components being on one side of the piping complex, it is noted that the compressors for the first and second cooling systems of Roberts et al are on one side of the system. Nevertheless, it is considered obvious to on ordinary practitioner in the art to place the components which will be connected together as close as possible to reduce the piping required in the system and to place them on one side to make the components easier to assemble and maintain.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Roberts '531 and '357 show liquefaction systems with precoolers and main cooling systems with heavies removal systems.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C. Doerrler whose telephone number is (571) 272-4807. The examiner can normally be reached on Monday-Friday 6:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler can be reached on (571) 272-4834. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
